

Drawing Walls

Your Artcraft template comes with a floor, a wall, and a few families already loaded.

To begin, we need walls. Often we are starting with a CAD drawing from our customer. Link your CAD drawing this way. Align the walls, then build your walls. Click Architecture > Walls and trace your CAD or draw to your dimensions. Before you click you can always type your wall dimension to create a wall that size, and then click.

Revision #1
